

# Explore Enquiry – Where in the world would you like to go?

## Sticky Knowledge

- There are seven continents in the world. They are Europe, Asia, Africa, North America, South America, Australasia and Antarctica.
- The continents cover 29% of the world's surface. That means more than 70% of the world's surface is water.
- The largest continent is Asia. Around 2/3 of the world's population live here. The world's tallest mountain range can be found here. They are called the Himalayas.
- Africa has 54 countries. That is more than any other continent.
- The longest river in the world can be found in Africa. It is called the River Nile.
- England is in Europe. Europe is the second smallest continent in the world.
- The Prime Meridian runs through Greenwich in London.

## Vital Vocabulary

Continent	A very large landmass, usually separated by water or other natural features, like mountains. There are seven continents in the world
Hemisphere	A half of the earth, usually divided by the equator into the northern and southern hemisphere.
Longitude	Imaginary lines that run from the North to South Poles.
Latitude	Imaginary lines that run around the earth from east to west.
Co-ordinates	A set of numbers and/or letters that show you a specific position on a map.
Tropic of Cancer	Imaginary line in the northern hemisphere
Tropic of Capricorn	Imaginary line in the southern hemisphere
Time zone	A time zone is an area on Earth that has a specific time that all citizens can set their clocks to. Different places on Earth have different time zones.
The Prime Meridian	The prime meridian is the imaginary line that divides Earth into two equal parts: the Eastern Hemisphere and the Western Hemisphere. The prime meridian is also used as the basis for the world's time zones. It is the starting point for the measuring system called longitude. The Prime Meridian runs through Greenwich in London.
International Date Line	An imaginary line that is on the opposite side of the world to the Prime Meridian.
Observatory	A place for observing and studying natural events on Earth or in space.
Compass	A compass is a device for finding direction. A compass needle is magnetic and always points north because it lines up with the Earth's magnetic force.
